# MAmidiMEmo A Virtual S/W Synthesizer

User's Manual - Rev 0.3

## Install & Basic Settings

- Install
  - Extract the downloaded zip file.
  - Click MAmidiMEmo.exe
  - Will open the MAmidiMEmo. If not, please check the followings.
    - .NET Framework 4.7 or later installed on your PC.
    - ► VC++ 2012 Runtime installed on your PC.
    - ► (Execute "DelZoneID.ps1" to remove "Zone.Identifier" flag.)

#### Window Overview

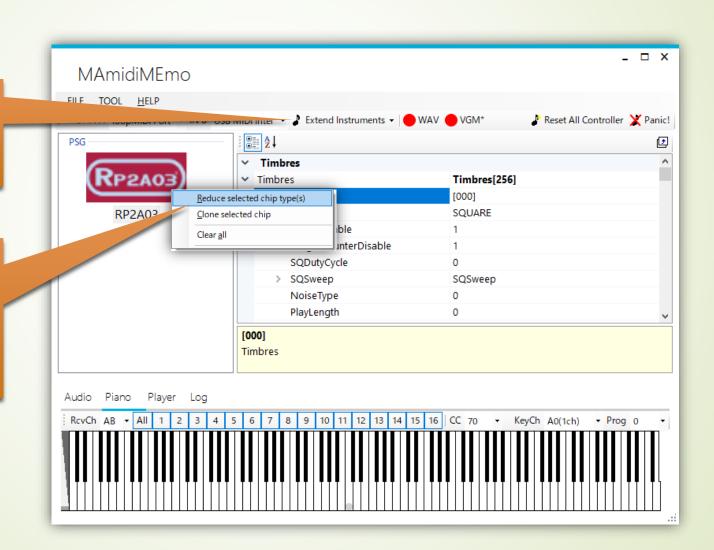

Chip
Parameter
Editor
(see next)

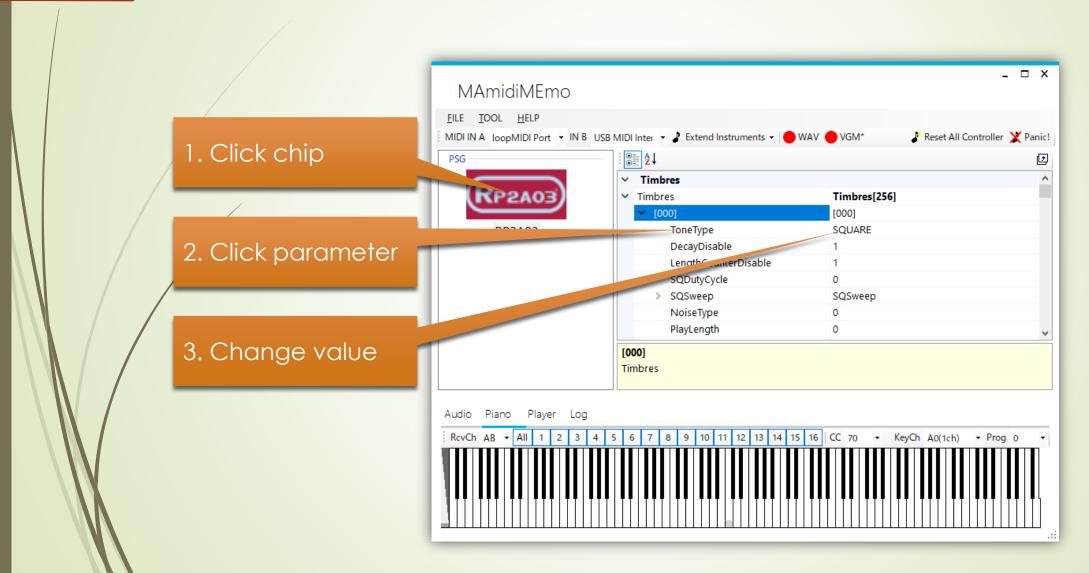

#### Add and Remove a Chip

To add Select the chip from this menu.

To remove
Open a context
menu and
select.

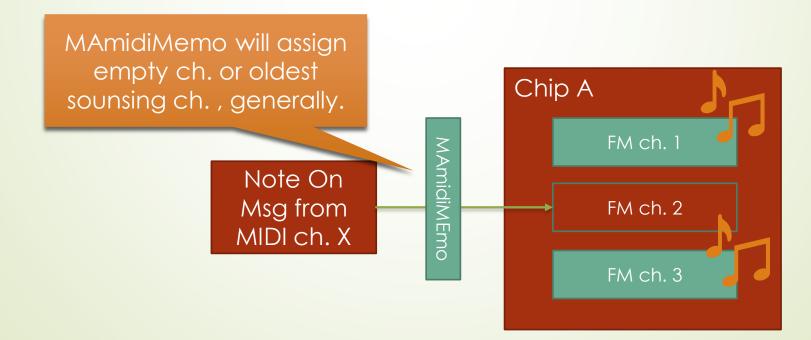

## Edit chip and sound parameters

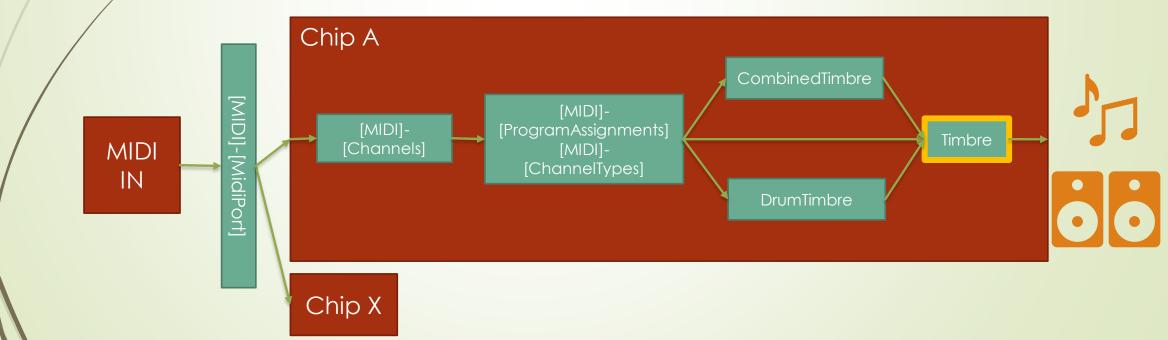

#### Between MIDI ch and Chip ch Relation.

- You don't need to concern the Chip ch., generally. MAmidiMEmo will assign suitable Chip ch. automatically. However, you need to concern a max ch. number of the Chip.
- MAmidiMEmo will assign oldest sounding ch. to sound the new sounds.

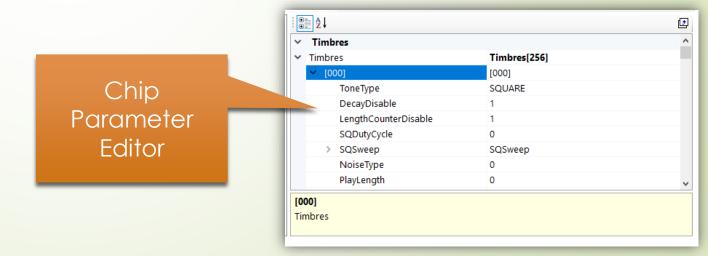

## Sounding Structure

- MAmidiMEmo outputs a sound from MIDI message along with the following structure.
  - So, at least, you need to edit the **Timbre** parameters to sound something.

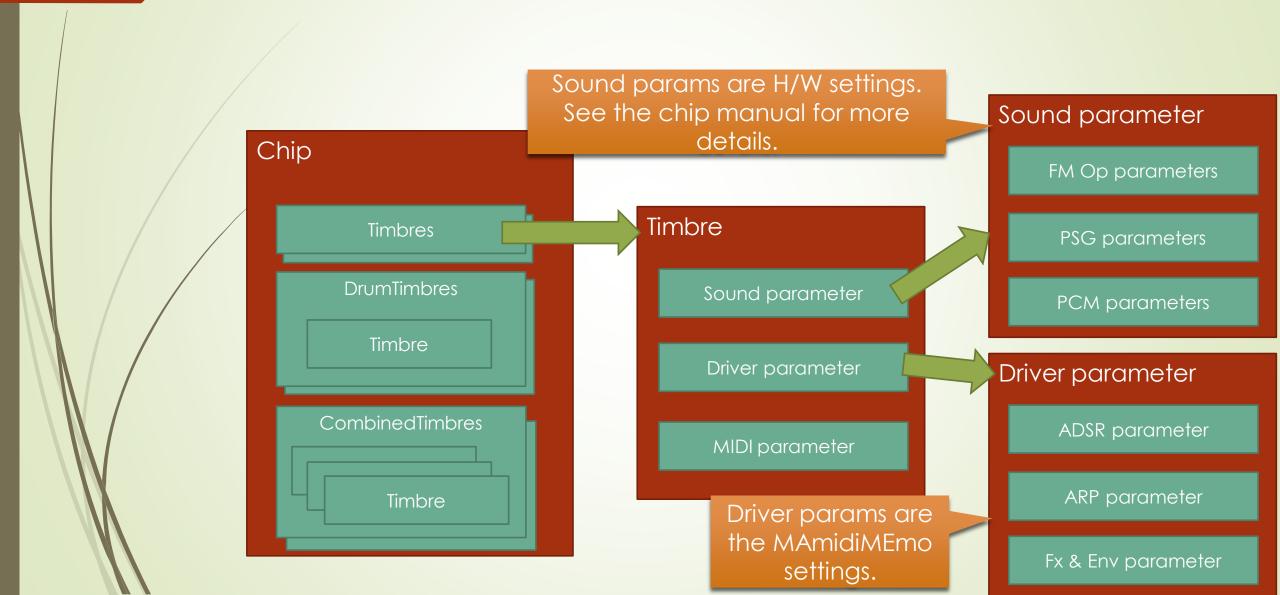

#### **Timbre**

- Generally, a chip has 256 Timbres, 256 CombinedTimbres, 128 DrumTimbres.
- CombinedTimbre can sound multiple Timbers at the same time (up to 4)
- DrumTimbre can sound Timbes as a Drum sounds (Ignoring Note Off msg).
- You can change the Timbre parameters on the Chip Parameter Editor. Generally, you need to learn the chip specification to edit the chip parameters.

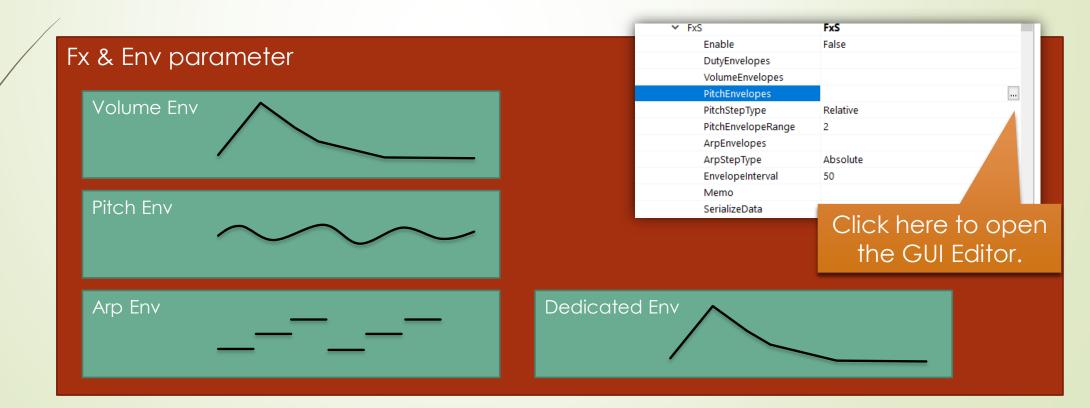

#### Timbre Structure

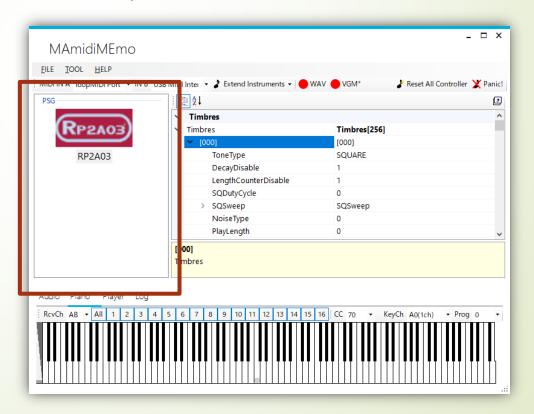

#### Driver parameters - Fx & Env Structure

You can make for a rich sound by using driver params. Especially, FxS can do it.

#### Sample sounds

There are sample sound files in the "Samples" folder. You can drop a sample file "\*.MAmi" to the left pane.

#### Additional files

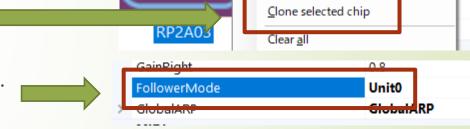

- YM2608
  - Place legitimate "ym2608\_adpcm\_rom.bin" file in the MAmidiMEmo directory to sound ADPCM rhythm sounds.
- MT-32
  - Place legitimate "MT32\_CONTROL.ROM" and "MT32\_PCM.ROM" in the MAmidiMEmo directory to sound ADPCM sounds.

#### Limit Break

Any chip can output only a few voices. However, MAmidiMEmo can break this limitation by the following steps.

- 2. Select the [Clone selected chip] Cloned chip added.
- Select the cloned chip and set the [Follower Mode] value to "Unit0\*".
   \* If clone source chip ID is 0.

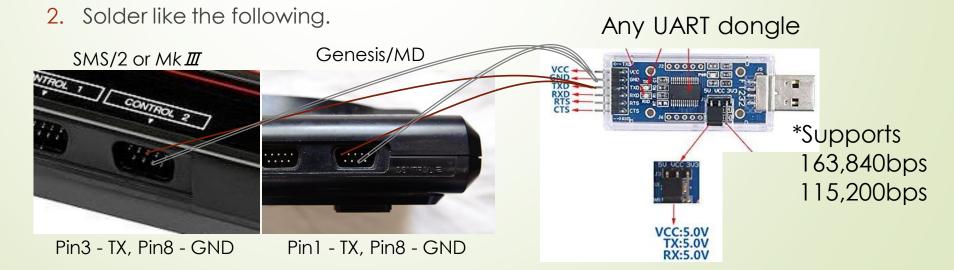

Reduce selected chip type(s)

- When the clone source chip consumed all voices, the cloned chip sound for the chip.
- If you want to extend max voices more, select the [Clone selected chip] of the cloned chip. And set the [Follower Mode] value to "Unit0".

# VGM Sound Interface(VSIF) - (1)

- MAmidiMEmo can drive real machine chips. Currently supports NTSC SMS(2, Mk Ⅲ) for SN76496/OPLL and NTSC Genesis(MD) for SN76496/OPNA2.
- How to
  - 1. Buy the following parts.
    - 1x UART (FT232R and so on) dongle (Note: Supports 163,840bps, 115,200bps)
    - 1x FLASH Cart for SMS or Genesis and 1x D-SUB 9 pin connector (Female) and cable

# VGM Sound Interface(VSIF) - (2)

- Burn VGMPlay\_md.bin(for Genesis) or VGMPlay\_sms.sms(for SMS) to your FLASH Cart
- 4. Set the COMPort name and select "VSIF SMS" or "VSIF Genesis".

LINQ	v
Chip(Dedicated)	
COMPort	COM4
SoundEngine	Real(VSIF Genesis)
CurrentSoundEngine	Real(VSIF Genesis)
Filter	

- 5. Done!
- If you can not sound sounds, make sure soldering and COMPort name.Or, please contact me.

# VGM Sound Interface (VSIF FTDI) for VGM Player

- VGM Player can drive real machine chips more faster if you use FTDI2xx(232R, 232H and so on). Currently supports NTSC Genesis(MD) for SN76496/OPNA2.
- How to
  - 1. Buy the following parts.
    - 1x FTDI2XX (FT232R and so on) dongle
    - 1x FLASH Cart for Genesis and 1x D-SUB 9 pin connector (Female) and cable
  - 2. Solder like the following.

    Genesis/MD

    Genesis/MD

#### **VGMPlayer**

1) Select interface type

- 5) Adjust CLK speed for FTDIxxx mode for each Console
- 6) Adjust buffer size for each file.

# Trouble Shooting for MAmi

If you noticed "sound lag" or "stutter", open the Settings dialog from [TOOL] menu. Check [Sound Type] and [Audio Latency] value.
